

# Elite 500

Modbus / BACnet / Profinet / IEC61850 protocol

Best in class accuracy

Graphical display

Support Rogowski coil

Hot pluggable communication modules

## High-precision, multiple communication, TFT display

The Elite 500 series includes devices with advanced power monitoring capabilities, which can be used for standalone device monitoring and power quality analysis as part of BMS, process industrial controls and SCADA systems.

It also offers data logging, control IOs and modular communication with multiple protocols for third party system integration.

Based on the application, Elite 500 allows customers to select conventional type CT or Rogowski coil input, which can be directly connected to the meter without the need for any additional integrator.

## Applications

- Energy transfer measurement and reconciliation
- Power plants, feeder monitoring, grid substations, wind turbines, renewables, industrial and commercial premises
- Online monitoring of energy exchange at various interface points
- Automation and system integration
- Process and factory automation
- Retrofit application up to 4000A can be served by using Rogowski coil along with Modbus / BACnet / Profinet / IEC 61850 protocol support, Analogue output and control IOs
- Oil and gas / Mining / Hospitals / Malls / Datacentres
- LV / MV / HV Switchgear

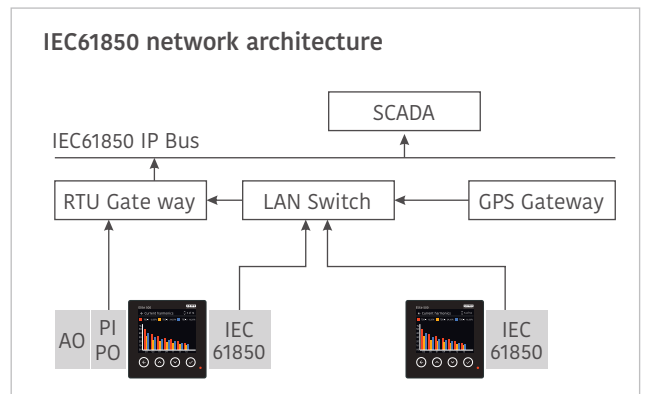

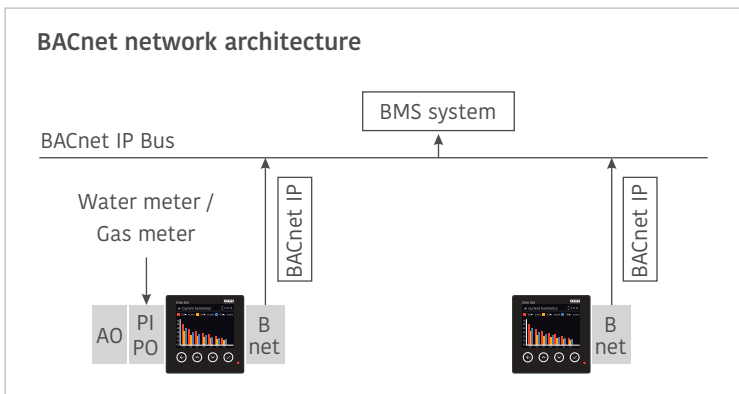

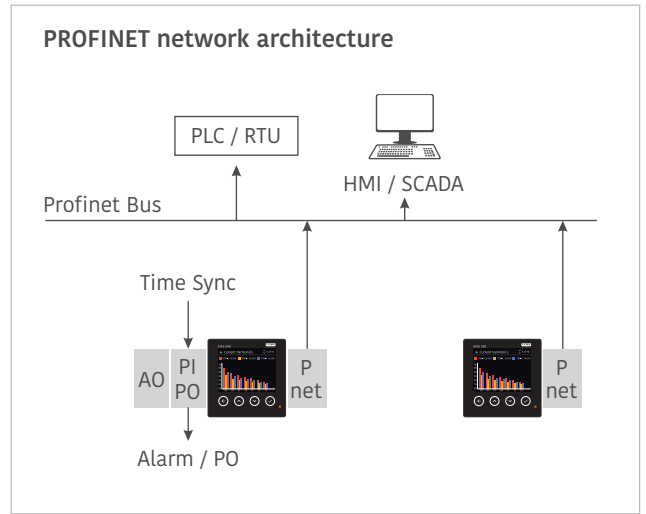

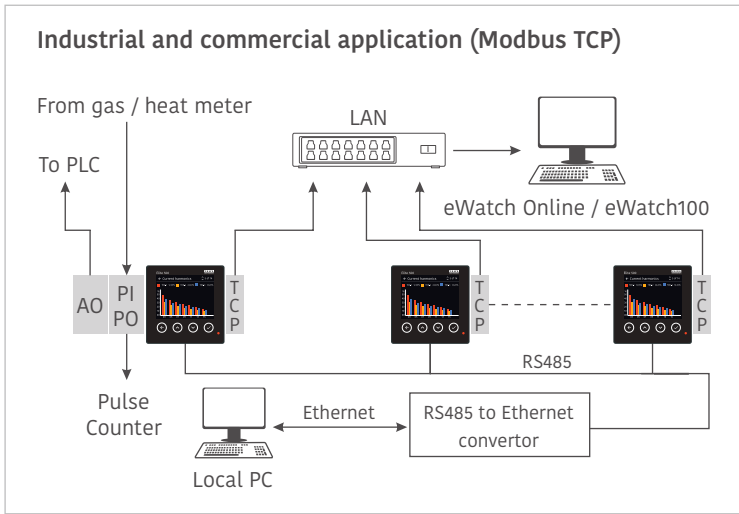

## Benefits

- Minimal integration cost through hot pluggable modular options for multiple communication ports
- Support of multiple industry standard protocols: MODBUS RTU / TCP, Profinet, BACnet and IEC 61850 for integration with SCADA and other automation systems
- Field replaceable hot pluggable communication, PIPO, alarm and analogue output modules
- Supports measurements for Energy Efficiency / LEED certification
- Large, high-resolution graphical colour display for analytical and graphical views
- Options to have conventional ring type CT or Rogowski coil

## Features

- 17 energy measurements support including net and absolute energy parameters
- Energy resolution: 7+3 digit, Instantaneous parameters: 4+3 digit
- Class 0.2S / 0.5S accuracy for active and reactive measurement
- TFT display showing vector diagram, bar chart, weekly / monthly energy consumption comparison
- Configurable favourite parameter on display page
- Time synchronisation options through SNTP
- Power quality features including individual harmonics, THD, sag, swell, voltage unbalance and interruption counter
- Total demand distortion (TDD) factors and waveform quality indices like K factor and crest factor
- Positive, negative and zero sequence components
- Flexible time-of-day tariff, maximum demand / demand support, DST (daylight saving time)
- Supports PIPO / DIDO, alarm and analogue output module
- Alerts and events on configured parameters
- Dual loggers for instantaneous and energy parameters
- Dual socket support on Ethernet TCP IP module allows for simultaneous communication over Modbus.
- Supports RS485 Modbus along with any chosen Ethernet protocol
